

Zarak Khan

Unity Developer · XR

Peshawar, Pakistan · +92 325 5533036 · zarakkhn2002@gmail.com · zarakob.github.io · linkedin.com/in/zarak-khan-5a30691a7

Unity developer specialising in mobile applications for iOS and Android and XR for Meta Quest. I take products from first prototype to store submission and own the whole stack, from interaction and spatial anchoring to backend, authentication and in-app purchases.

EXPERIENCE

Unity / XR Developer — Bave, Peshawar

Feb 2025 – Present

Quest Clues: location-based AR mystery game (iOS & Android). Sole developer, client project.

- Built the full game solo in Unity with AR Foundation, GPS and Mapbox. Players walk to real places and collect AR clues that unlock a story.
- Designed a city-agnostic placement system that anchors clues and story beats to common categories of points of interest (universities, parks, landmarks, malls, hospitals), so the game works in practically any city.
- Engineered a Firebase backend and a web content dashboard where new stories go live in a few clicks, with no app update.
- Shipped Google, Apple, phone and email sign-in, in-app purchases, and runtime localisation in 9 languages. Submitted to the App Store and Google Play.

Claude & AI Automation Specialist, outsourced by Bave to Aithentic (Jul 2026 – Present)

- Design and build AI automation systems on Claude for client marketing, sales and recruitment workflows, owning each build from technical proposal and architecture to a working system.

VR / Game Developer — DevBlock Studios, Peshawar

Aug 2024 – Jan 2025

- Built a VR confined-space simulation in Unity for clinical exposure therapy, delivered to a KSA-based professor treating patients with claustrophobia.
- Implemented hand-tracking interactions and in-VR UI with the XR Interaction Toolkit and OpenXR. Ran user testing and delivered the finished application.

Game Development Intern — Mindstorm Studios, Lahore

Jul 2024 – Sep 2024

- Took a game from concept to completion in Unity, handling every stage from design and implementation to testing and debugging.
- Introduced a Git workflow for collaboration and code management.

PRODUCTS & PROJECTS

Tracer MR — Mixed-Reality Tracing App (Meta Quest 3 / 3S)

Solo · In launch prep

- Standalone MR app that locks transparent artwork onto real paper, canvas or walls through passthrough, so users can trace it by hand.
- Prototyped and on-device-tested spatial anchoring first (Meta XR SDK, MRUK), retiring the core risk: overlays stay stable enough to trace against while the head and hands move.
- Built hand-tracked trace-mode controls, a floating in-headset menu, image import with background removal and outline extraction, and a curated line-art library with a paid custom-image unlock.

Founder — Mind Over Fear VR

Mar 2025 – Dec 2025

- Founded and built a Unity VR exposure-therapy platform with scenarios for claustrophobia (elevator, MRI), road-crossing anxiety, and social and public-speaking settings with an AI-driven audience.
- Developed the Quest client in Unity 6 (Meta Quest SDK, URP, C#) on a Firebase backend. Treated it as a medical product and validated it in sessions with licensed clinical professionals.
- Incubated at the National Incubation Center and Orbit Startups. Led a team of 3 and presented to doctors, healthcare stakeholders and investors.

Co-Founder — Favor

Aug 2024 – Dec 2024

- Food-waste startup. Pitched at city and regional level and competed at the Zindigi Prize, GIKI.

SKILLS

Unity & XR	Unity 6, C#, Meta XR SDK, MRUK / spatial anchors, passthrough MR, OpenXR, XR Interaction Toolkit, hand tracking, AR Foundation / ARCore, URP
Game systems	Gameplay & interaction, pathfinding / enemy AI, in-game & in-VR UI, localisation, in-app purchases
Backend & platforms	Firebase, REST APIs, Mapbox / GPS, authentication; Meta Quest 3, Android, iOS, WebGL
Tools	Git, Blender, Cheat Engine / low-level reverse engineering
Also	AI automation with Claude & LLMs, project management

EDUCATION

BS Computer Science	2022 – 2026
Institute of Management Sciences, Peshawar	
HSSC Pre-Engineering	2020 – 2022
Army Public School, Mardan	

LANGUAGES

English, Urdu, Pashto, Punjabi

CERTIFICATIONS & AWARDS

- IM | Hackathon '24: Runner-Up
- Complete Unity C# 3D: GameDev.tv
- Game Jam Completion: Mindstorm Studios
- Building AI Applications using API: Zaheen.IT

VOLUNTEER

- Summer Camp Instructor: Knovative '25
- Marketing Team: IM | Olympiad '23, '24
